summary

Software Development Engineer II at Amazon with a background as a **Dual Degree graduate in Computer Engineering and Statistics**. My career is driven by a genuine love for solving complex algorithmic problems, particularly in **Combinatorial Optimization** and **Operations Research**. At AWS, I transitioned to **Cloud Computing**, launching greenfield serverless products and building internal automation frameworks that drastically reduced regional expansion timelines from weeks to days. I am at my best when I can bridge the gap between theoretical math and industrial-grade software, whether thatś solving **Vehicle Routing Problems** or architecting modular microservices grounded in **Domain-Driven Design**.

skills

- **Languages:** Kotlin, Python, TypeScript, Java.
- **Cloud:** AWS (CloudFormation, CDK, DynamoDB, EC2, ECS, Lambda, S3, SNS, SQS, Step Functions).
- **Math & Data:** Combinatorial Optimization, VRP, Algorithms, Statistics.

work

2026/03 – present **Software Development Engineer II** **Amazon**

- **Team:** Amazon - EU InTech - Consumer Selection Discovery

2024/12 – 2026/02 **Software Development Engineer II** **Amazon Web Services (AWS)**

- **Team:** AWS - Applied AI Solutions - Autonomous Operations
- **Built** a Region Build Automation (RBA) framework with AWS CDK on top of Amazon internal tooling. **Drastically reduced** the effort to expand AWS Services to new regions from weeks to days by **leveraging cross-account resource referencing**.

2022/07 – 2024/11 **Software Development Engineer I** **Amazon Web Services (AWS)**

- **Team:** AWS - Industry Products - Automotive
- **Architected and launched** a greenfield serverless SaaS product tailored for the automotive industry, leveraging Lambda, Step Functions, and DynamoDB.
- **Engineered** scalable full-stack solutions using Kotlin, Python, and TypeScript, utilizing AWS CDK to enforce rigorous Infrastructure as Code standards.
- **Owned the full product lifecycle** from concept to implementation, delivering a high-scale service optimized for complex automotive use cases.

2021/04 – 2022/06 **Software Engineer** **Clariteia**

- **Developed Minos**, a custom Microservices Framework grounded in Domain-Driven Design (DDD) principles, establishing the core infrastructure for modular application development.

2018/09 – 2021/04 **Data Scientist** **Unlimiteck Company Builder**

- **Built an autonomous, unsupervised testing system** capable of intelligent navigation and scraping to proactively detect UI changes and predict bug-susceptible areas.
- **Designed a proprietary remote computing protocol** that was adopted as the company's standard strategy for secure data sharing.
- **Spearheaded the standardization** of Python development workflows by implementing a VCS-based packaging strategy, leading the migration from Subversion to Git.
- **Implemented Deep Learning strategies** for a Car Damage Detection system, focusing on advanced image analysis.

2018/06 – 2018/08 **Data Scientist Intern** **Unlimiteck Company Builder**

- **Developed a comprehensive Vehicle Routing solving suite** that achieved performance benchmarks equivalent to leading commercial alternatives while offering superior extensibility.

2018/03 – 2018/08 **Research Assistant Intern** **University of Valladolid**

- **Engineered an R-based ETL pipeline** to correlate external vehicle metrics with internal component damage, streamlining data analysis for the research group.

2016/06 – 2016/08 **Software Engineer Intern** **Brooktec**

- Developed a song polling plugin for WordPress.

education

2017/09 – 2020/09 **BSc. Statistics, 7.925/10.0** **University of Valladolid**

- **Specialized in Operations Research,** analyzing combinatorial optimization problems with a focus on Vehicle Routing Problems (VRPs).
- **Thesis:** Scalable solving methods for the Dial-a-Ride Problem.
- **High marks:** Operation Research Models (Hons), Statistical Computing, Categorical Data Analysis.

2019/01 – 2019/07 **Erasmus+, Statistics, 28/30** **Università di Bologna**

- **International Exchange Program:** Completed coursework in Advanced Statistics and Survival Analysis (conducted in English).
- **Gained deep expertise** in Generalized Linear Models (GLM).
- **High marks:** Statistical Models and Applications, Advanced Survival Analysis.

2013/09 – 2017/07 **BSc. Computer Engineering, Computation, 7.885/10.0** **University of Valladolid**

- **Specialized in Algorithms,** focusing on Advanced Algorithmic Design, Parallel Computing, and Software Engineering patterns.
- **Thesis:** Algorithms for Big Data: Graphs and PageRank.
- **High marks:** Algorithms and Computing (Hons), Codes and Cryptography (Hons), Parallel Computing (Hons), Operating Systems Structures (Hons), Data Mining, Machine Learning Techniques, Web Services and Systems, Fundamentals of Computer Networks.
